

The BIREAN programme is a pan-African research initiative that aims to produce high-quality Africa-led neuroscience research

We are **looking for academic partners in East Africa** to join our network as we are applying for funding to conduct a large-scale randomised controlled trial (RCT) in East Africa on neurofeedback therapy. The RCT study will follow a recent pilot study in Rwanda in which we demonstrated the efficacy of a low-cost neurotech headset to deliver neurofeedback to reduce PTSD symptom severity.

If your research group has relevant expertise in mental health and/or neurotherapy, we encourage you to complete the application process by following this link (Deadline: March 26, 2021):

<https://forms.gle/hUWS7zbeaZRMNJsx9>

A dedicated online BIREAN information event will be hosted on April 16, 2021 featuring keynote talks on neurotechnology research, and a demonstration of the low-cost electroencephalography (EEG) wearable headset, the FlexEEG. You will also be invited to participate in initial, preparatory research activities.

For additional information, please do not hesitate to contact Dr Naomi Du Bois, Ulster University (n.du-bois@ulster.ac.uk) or Dr Stefan Jansen, University of Rwanda (sjansen.ur@gmail.com).
